MEMORANDUM FOR: Deputy Director for Science and Technology

If this looks OK to you, I will put it in the mail. I have attached a check list which I had prepared for OEL. As you can see, the review there is considerably more comprehensive and really requires the project engineer to think out his entire project. This is considerably more than ORD would probably be willing to swallow at this time, and I am no longer sure just how conscientious OEL is in completely following this either.
